EDUCATION

University of Antilles *Dec. 2020 - 2026 (Expected)*
Ph.D. in Economics
Dissertation: "Three Essays on the Economics of Disasters"
Advisors: Professor Patrice Borda & Professor Alain Maurin
Affiliated research center: CREDDI (Research Center in Economics and Law of Island Development)

M.S. in Applied Economics, University of Antilles 2020
Thesis: "The Impact of Natural Disasters on the Economy: A Case Study of the Caribbean–Central America Zone, 1979–2010"
Advisor: Professor Patrice Borda

B.S. in Economics and Management, University of Antilles 2018

RESEARCH FIELDS

Primary	International Macroeconomics, Climate Macroeconomics
Secondary	Macro-Finance, Economics of Disasters, Regional Economics
Methods	DSGE Modeling, Structural Macroeconometrics, Local Projections

RESEARCH

Publications in Peer-Reviewed Journals

- "Inflation Tales from the French Overseas Departments," with Patrice Borda (University of Antilles). Accepted for publication, *Revue d'Économie Régionale & Urbaine* (RERU, CNU rank B), forthcoming.

Abstract. This paper examines how disaggregated consumer price index categories in the French overseas departments (DROMs) of Martinique, Guadeloupe and Réunion respond to three types of exogenous shock: natural disasters, global supply chain disruptions and local fiscal frictions. It uses monthly data from 1999 to 2021. Due to their structural characteristics, high import dependence, concentrated market structures, limited substitution possibilities and recurrent exposure to extreme weather events, these territories constitute a particularly relevant empirical setting, suggesting that standard inflation transmission mechanisms may operate differently from those observed in larger, more diversified economies. Furthermore, the absence of exchange rate fluctuations within the French monetary union enables shock transmission channels to be identified in isolation from currency effects. First, we establish that DROM prices grow at the same long-run rate as mainland French prices, responding positively to national inflation shocks and reflecting their strong import dependence. We then use the smooth local projection method, developed by Barnichon and Brownlees (2019) and combined with an instrumental variable strategy, to identify the dynamic causal effects of each shock on disaggregated inflation. Additionally, we introduce a novel proxy for local economic activity, based on night-time light satellite data, which extends coverage beyond the limitations of conventional statistical series. Our empirical analysis yielded three significant findings. Firstly, cyclones act as a narrow supply shock, raising the prices of perishable foods, but leaving headline inflation largely unaffected. Secondly, global supply disruptions reallocate relative prices across categories rather than fuelling broad-based inflation. Thirdly, octroi de mer shocks generate no generalised inflationary pressure, producing a modest disinflationary effect in Guadeloupe and Martinique over the medium term, with little effect in Réunion. Finally, our study provides the first quantitative evaluation of the Bouclier Qualité Prix policy, demonstrating its effectiveness in mitigating the pass-through of octroi de mer shocks to food prices, particularly in Martinique and Réunion.

Working Papers

- "Degraded, Not Destroyed: Hurricanes, Productivity and Country Risk in Caribbean Economies."

Abstract. Caribbean economies differ substantially in their exposure to tourism and in their external debt. We ask whether these differences change the mechanisms through which a hurricane affects output and external finance. We calibrate a two-sector small open economy model with a productivity-sensitive country risk premium to Jamaica, Dominica and the Bahamas, and neutralize each mechanism in turn. We find that the leading mechanisms are the same for the three islands: the loss in the efficiency of surviving capital accounts for 61–65% of first-year output loss, compared with 33–35% attributable to physical destruction of the capital stock. The same productivity loss also accounts for most of the change in the country risk premium, and hence the response of net private external debt. Structural differences mainly affect the composition of the response, not its aggregate magnitude. The initial level of private external debt accounts for little of the cross-island differences in the financial contribution; the attribution of the remaining gap is sensitive to a weakly identified demand parameter. The ranking of channels is robust to wide changes in the parameters. These include premium elasticities that bring the rise in the interest rate down from hundreds to tens of basis points, the order of magnitude suggested by Jamaican spreads after Hurricane Melissa. The size and sign of the debt response, by contrast, are not robust.

AWARDS & HONORS

- Third Place, Research Days Poster Competition, "Cyclone Transmission Channels in a Caribbean Economy: A Two-Sector DSGE Model Calibrated to Jamaica" May 2026
  University of Antilles
- Third Place & Public Choice Award, Research Days Poster Competition, "Inflation Tales from the French Overseas Departments" Jun. 2025
  University of Antilles

CONFERENCE PRESENTATIONS & SEMINARS

Selected Conference Presentations

Climate, Weather and Geopolitical Risk: International Financial Spillovers, Systemic Risk and Policy Responses Workshop Nov. 2026
Dublin, Ireland
Supported by the UCD Earth Institute and the Journal of International Money and Finance (JIMF)

ASSET 2025, Meeting of the Association of Southern European Economic Theorists Nov. 2025
Rabat, Morocco
Peer-reviewed international conference gathering researchers in analytical and quantitative economics and econometrics.

TEPP 2025, Annual Conference of the CNRS TEPP Research Network Nov. 2025
Rennes, France
Peer-reviewed conference organized by the CNRS Theory and Evaluation of Public Policies (TEPP) Research Network.

ARUM 2024, Actes de la Recherche Ultra Marine (Proceedings of Overseas Research) Nov. 2024
Paris, France
Peer-reviewed conference organized by ATOM and the CNRS TEPP Research Network.

Research Seminars

CREDDI Doctoral Seminar, University of Antilles — Nov. 2026
Research Seminar "Eryc Edinval", CREDDI, University of Antilles — Jan. 2025
CREDDI Doctoral Seminar, University of Antilles — Feb. 2024

Science Outreach and Public Engagement

"Bik a Syans" Kick-off Meeting – Introduction to Research, University of Antilles — Jun. 2025

Panel Moderator. "The Economy and the Caribbean Carnival" — Jan. 2025
Organized by Karibbean Festimas in partnership with the Department of Guadeloupe. Departmental Museum of Art and History, Pointe-à-Pitre, Guadeloupe.

PROFESSIONAL EXPERIENCE

Financial and Administrative Manager — Jan. 2022 - Present
JURISDEM · Permanent Part-time

- Oversees corporate accounting and the preparation of financial statements
- Manages cash flow, investments, and the relationship with the bank
- Oversees management control, including planning, budgeting, and related activities
- Defines and improves administrative and accounting control procedures

Economic Data Analyst — Mar. 2020 - Sept. 2020
Région Guadeloupe · Intern

- Contributed to the Observation and Studies Department, which develops territorial economic expertise to inform regional economic policy
- Participated in setting up the tools and mechanisms of a regional economic observatory
- Managed databases and carried out the statistical processing of collected data
- Conducted economic studies and wrote reports
- Took part in meetings with institutions, economic actors, and partners

ACADEMIC AND INSTITUTIONAL ENGAGEMENT

Elected PhD Representative, Research Committee — Jun. 2024 - Present
University of Antilles
Represents doctoral candidates in discussions on research strategy, doctoral training, and academic funding.

Elected Student Vice-President — Apr. 2022 - Jun. 2024
University of Antilles
Member of the university's governance board, involved in strategic decision-making, academic planning, and student affairs. Represented the entire student body at the highest institutional level.

Elected Member, Academic and Student Life Council (CFVU) — Dec. 2021 - Jun. 2024
University of Antilles
Participated in academic and pedagogical decision-making, including curriculum design, student support policies, and evaluation procedures.

SKILLS & OTHER INFORMATION

Software	R, Dynare, MATLAB, LaTeX, Excel
Methods	Structural Macroeconometrics, DSGE Modeling, Local Projections
Languages	English (advanced), French (native)
Citizenship	France
